

# Canyon Crest Academy: AP Physics 2

Level of Difficulty	Estimated Homework	Prerequisites
<input type="checkbox"/> Moderate <input checked="" type="checkbox"/> Difficult <input type="checkbox"/> Very Difficult	60 minutes per day* *This is a general guideline for planning purposes. A student's ability level may affect actual preparation time needed.	<b>District</b> The ability and academic background to complete college-level coursework. <b>Department</b> Completion of Physics with an A and/or Completion of AP Physics 1 with a C or higher and Completion or concurrent enrollment in Integrated Math 3 or Algebra 2

## Course Description

AP Physics 2 is designed for students planning to major in engineering or physics in college. **This course is taught with the assumption that students have a strong background in high school physics and strong math skills.** The emphasis of the course is placed on understanding the basic concepts of mechanics, dynamics, optics and modern (atomic) physics, electricity, magnetism and application of these concepts. These will include the deep understanding in the following areas;

1. Objects and systems have properties such as mass and charge. Systems may have internal structure.
2. Fields existing in space can be used to explain interactions.
3. The interactions of an object with other objects can be described by forces.
4. Interactions between systems can result in changes in those systems.
5. Changes that occur as a result of interactions are constrained by conservation laws.
6. Waves can transfer energy and momentum from one location to another without the permanent transfer of mass and serve as a mathematical model for the description of other phenomena.
7. The mathematics of probability can be used to describe the behavior of complex systems and to interpret the behavior of quantum mechanical systems.

Students will explore these topics through discussions, laboratory investigations, teacher demonstrations, and in-class assignments. This course is aligned with the California State Standards in Physics as well as the guidelines described by CollegeBoard.

## Grading

The grading system is based on weighted percentages. Each assignment will have a point value and be weighed according to the category it falls under. Individual teachers may make slight modifications on the weighted percentages.

Category	Weight
Homework/Class work	15%
Laboratory/Projects	30%
Quiz/Exams	55%
